The synonyms of "Alkaline" are: alkalic, corrosive, mordant, acid, burning, stinging, acrid, harsh, destructive

Alkaline as an Adjective

Definitions of "Alkaline" as an adjective

According to the <u>Oxford Dictionary of English</u>, "alkaline" as an adjective can have the following definitions:

- Having the properties of an alkali, or containing alkali; having a pH greater than 7.
- Relating to or containing an alkali; having a pH greater than 7.

Synonyms of "Alkaline" as an adjective (9 Words)

acid	Having the characteristics of an acid. <i>Acid</i> soils.
<u>acrid</u>	Harsh or corrosive in tone. Her acrid remarks make her many enemies.
alkalic	(of a rock or mineral) richer in sodium and/or potassium than is usual for its type.
<u>burning</u>	Of immediate import. Burning issues of the day.
corrosive	Spitefully sarcastic. <i>Corrosive</i> cristism.
<u>destructive</u>	Causing great and irreparable damage. A policy that is destructive to the economy.
harsh	Having an undesirably strong effect. A harsh penalty.

mordant	Harshly ironic or sinister. A mordant sense of humour.
stinging	Having a sting; capable of wounding or piercing with a sting. <i>A stinging rebuke.</i>

Usage Examples of "Alkaline" as an adjective

- Alkaline soils derived from chalk or limestone.
- An alkaline soil.
- A slightly alkaline solution.

Associations of "Alkaline" (30 Words)

acetate	A transparency made of cellulose acetate film. <i>Acetate silk</i> .
acid	Having the characteristics of an acid. An acid reaction.
alkali	Any of various water-soluble compounds capable of turning litmus blue and reacting with an acid to form a salt and water. Flint is not subject to chemical weathering except by strong alkali s.
<u>atom</u>	Atomic particles as a source of nuclear energy. <i>The power of the atom</i> .
battery	An artillery subunit of guns, men, and vehicles. A camera battery .
brackish	Of fish or other organisms living in or requiring brackish water. A cup of brackish water.

brine	Soak in brine. Brine d anchovies.
cadmium	The chemical element of atomic number 48, a silvery-white metal.
carbonate	Convert into a carbonate.
<u>chemistry</u>	The chemical composition and properties of a substance or body. <i>The chemistry of soil.</i>
desalinate	Remove salt from (seawater. Desalinate water.
electrolyte	A liquid or gel which contains ions and can be decomposed by electrolysis, e.g. that present in a battery. The proper amount and distribution of electrolytes in the body is essential for health.
galvanic	Pertaining to or producing electric current by chemical action. A voltaic or galvanic couple.
hydroxide	A compound of a metal with the hydroxide ion OH as in many alkalis or the group OH.
ion	A particle that is electrically charged (positive or negative); an atom or molecule or group that has lost or gained one or more electrons. <i>Hydrogen</i> ion s.
lithium	Lithium carbonate or another lithium salt used as a mood stabilizing drug.
<u>metal</u>	Cover with metal. An adjustable pole made of metal .
nitrate	Any compound containing the nitrate group such as a salt or ester of nitric acid. Fish fry populations are damaged by nitrate .
oxide	A binary compound of oxygen with another element or group. <i>Nitrogen oxide</i> .
potassium	A light soft silver-white metallic element of the alkali metal group; oxidizes rapidly in air and reacts violently with water; is abundant in nature in combined forms occurring in sea water and in carnallite and kainite and sylvite.
reagent	A chemical agent for use in chemical reactions. This compound is a very sensitive reagent for copper.
saccharin	A sweet-tasting synthetic compound used in food and drink as a substitute for sugar.
saline	A saline solution used in medicine. I was having a saline transfusion day and night.

The taste experience when common salt is taken into the mouth. salt The region is rich in **salt** plant communities and reed beds. Containing or filled with salt. salty **Salty** language. Water in or taken from the sea. seawater A seawater swimming pool. A salt in which the anion contains both silicon and oxygen, especially one of silicate the anion SiO_4^{2-} . The chemical element of atomic number 14 a non metal with semiconducting silicon properties used in making electronic circuits Pure silicon exists in a shiny dark grey crystalline form and as an amorphous powder. A silvery soft waxy metallic element of the alkali metal group; occurs abundantly in natural compounds (especially in salt water); burns with a sodium vellow flame and reacts violently in water; occurs in sea water and in the mineral halite (r.

sulfide A compound of sulphur and some other element that is more electropositive.
